

Research Report provided by Vice-Chancellor Lutz Preussmann

September and October 2016. High-level meetings and UAF was played a central role in all these high-level

President Obama used Alaska as a backdrop for his State of the Union address that time, many high-level cabinet members, ambassadors, and senators were in UAF, these include the President's Science Advisor, Secretary of the Navy, Secretary of Energy, Administrator of EPA, and Director of NSF.

We are also proud of our ability to work with our community partners, including students with research experience and the local business community. We are committed to economic diversity by introducing new industries, practices, models and the capital needed to turn ideas to reality. To demonstrate our capabilities, UAF has developed a number of innovative solutions to UAF to learn more about our capabilities. We have provided information on our capabilities to our legislators and other community leaders. We have also provided information on the value and positive economic impact for the state. The knowledge of our faculty and staff and students is to be shared with our community. We also need a public relations strategy to show how we may better serve the state and our community. We have developed a strategy to reach legislators who were unable to participate in person. It is essential that our people continue to communicate with all our legislators and to make their voices heard. We have also provided information on our capabilities to our legislators and other community leaders. We have also provided information on the value and positive economic impact for the state. 2016.pdf

Last week, several UAF researchers participated in a meeting supporting the White House Arctic Council Ministerial. We were repeatedly told that this is a high priority for the White House. The meeting was held at UAF in August 2016. There is more information here: <http://www.arctic-council.org/en/about-us/press-releases/2016/08/22/white-house-arctic-council-ministerial>

active discussions regarding collaboration of research institutions.

This week, the Arctic Council released a report on advances in Arctic science and policy. One of the priorities was mapping. <https://www.arctic-council.org/en/about-us/press-releases/2016/08/22/white-house-arctic-council-ministerial>

Mapping was a high priority for UAF researchers and we pushed empirically to have this included as a priority of the US Chairmanship. This mapping capability will be expanded to include the Arctic.

The Arctic Council released a report on advances in Arctic science and policy. One of the priorities was mapping. <https://www.arctic-council.org/en/about-us/press-releases/2016/08/22/white-house-arctic-council-ministerial>

Everyone expects this agreement to be signed by the end of the Arctic Council Chairmanship in May 2017. So, this agreement is highly anticipated and is a high priority for the US Chairmanship.

Listening Sessions were held with those who had concerns or suggestions with the Office of Intellectual Property. Several were quite well attended and good ideas were suggested and acted upon.
